Webex App

Questions?

Use Webex app to chat with the speaker after the session

How

1. Find this session in the Cisco Events app
2. Click “Join the Discussion”
3. Install the Webex app or go directly to the Webex space
4. Enter messages/questions in the Webex space

Webex spaces will be moderated by the speaker until February 27, 2026.

I was going to talk about CDKTF...

...and then this happened...

Sunset Notice

Terraform CDK (CDKTF) will sunset and be archived on December 10, 2025. HashiCorp, an IBM Company, will no longer maintain or develop the project after that date. Unfortunately, Terraform CDK did not find product-market fit at scale. HashiCorp, an IBM Company, has chosen to focus its investments on Terraform core and its broader ecosystem.

As of December 10, 2025, Terraform CDK will be archived on GitHub, and the documentation will reflect its deprecated status. The archived code will remain available on GitHub, but it will be read-only. No further updates, fixes, or improvements (including compatibility updates) will be made.

You will be able to continue to use Terraform CDK at your own risk. Terraform CDK is licensed under the Mozilla Public License (MPL). HashiCorp, an IBM Company, does not apply any additional restrictions. We encourage community forks if there's interest in continuing development independently.

...and so we move on...

Visualizing Object Relationships

A picture is worth a thousand...

...lines of code?

- Terraform is “end-state” declarative; builds a resource graph for configuration application
- The resource graph is generated at all stages; includes state if present
  - Uses all files in project folder
- Graph can be visualized using native terraform commands
  - Native output in DOT format (Graphviz)
  - Can be converted to graphical format using dot commands

cisco

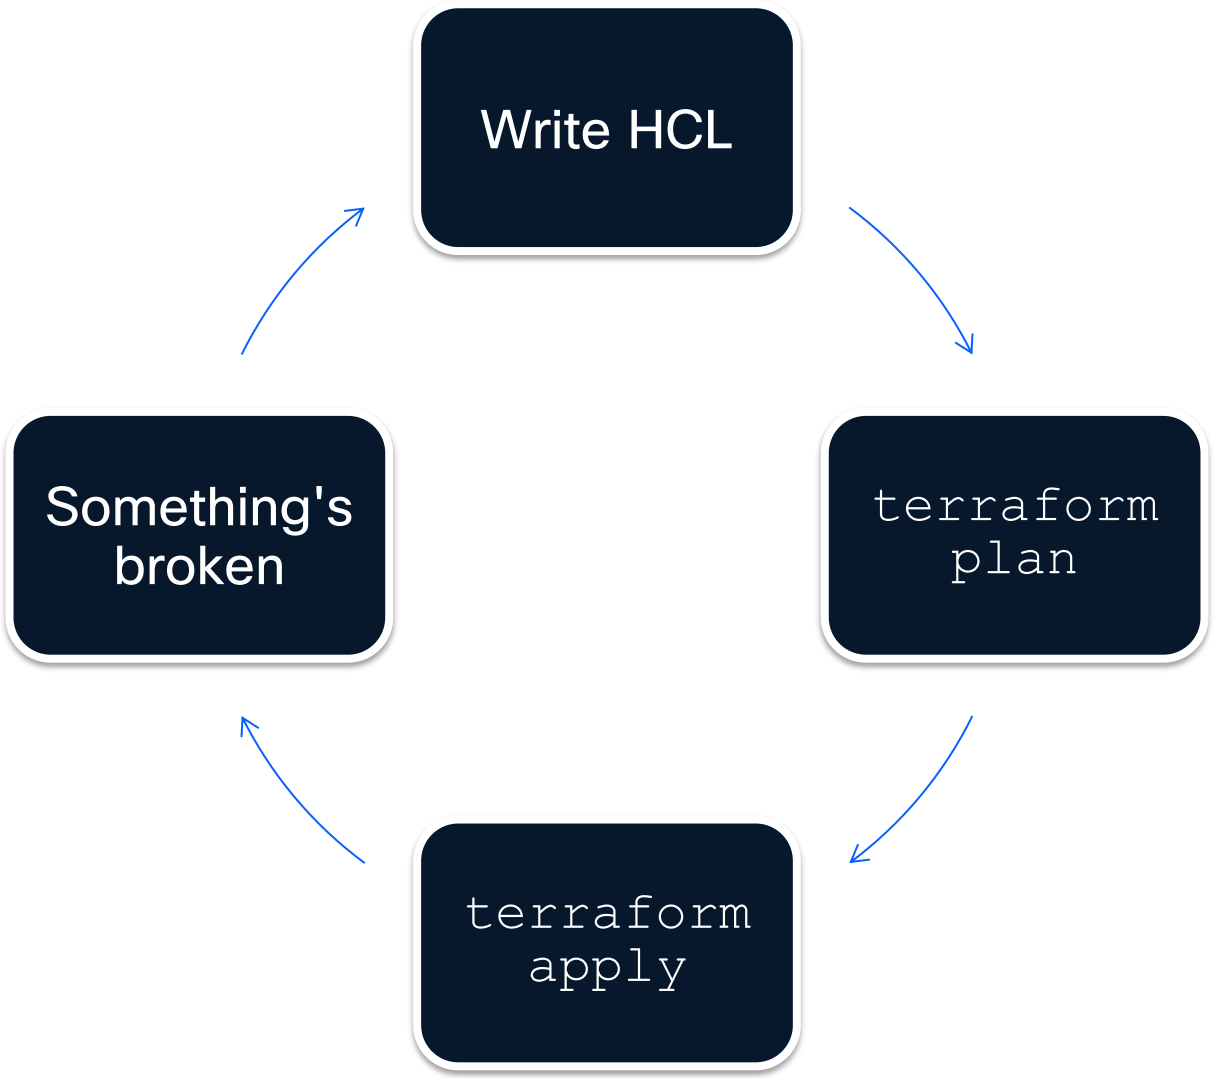

DOT Syntax Example

```
digraph {
        compound = "true"
        newrank = "true"
        subgraph "root" {
                "[root] aci_bridge_domain.terraform_bd (expand)" [label = "aci_bridge_domain.terraform_bd", shape =
"box"]
                "[root] aci_subnet.terraform_bd_subnet (expand)" [label = "aci_subnet.terraform_bd_subnet", shape =
"box"]
                "[root] aci_tenant.terraform_tenant (expand)" [label = "aci_tenant.terraform_tenant", shape = "box"]
                "[root] aci_vrf.terraform_vrf (expand)" [label = "aci_vrf.terraform_vrf", shape = "box"]
                "[root] provider[\"registry.terraform.io/ciscodevnet/aci\"]" [label =
"provider[\"registry.terraform.io/ciscodevnet/aci\"]", shape = "diamond"]
                "[root] var.bd" [label = "var.bd", shape = "note"]
                "[root] var.subnet" [label = "var.subnet", shape = "note"]
                "[root] var.tenant" [label = "var.tenant", shape = "note"]
                "[root] var.user" [label = "var.user", shape = "note"]
                "[root] var.vrf" [label = "var.vrf", shape = "note"]
                "[root] aci_bridge_domain.terraform_bd (expand)" -> "[root] aci_vrf.terraform_vrf (expand)"
                "[root] aci_bridge_domain.terraform_bd (expand)" -> "[root] var.bd"
                "[root] aci_subnet.terraform_bd_subnet (expand)" -> "[root] aci_bridge_domain.terraform_bd (expand)"
                "[root] aci_subnet.terraform_bd_subnet (expand)" -> "[root] var.subnet"
                "[root] aci_tenant.terraform_tenant (expand)" -> "[root]
provider[\"registry.terraform.io/ciscodevnet/aci\"]"
                "[root] aci_tenant.terraform_tenant (expand)" -> "[root] var.tenant"
                "[root] aci_vrf.terraform_vrf (expand)" -> "[root] aci_tenant.terraform_tenant (expand)"
                "[root] aci_vrf.terraform_vrf (expand)" -> "[root] var.vrf"
                "[root] provider[\"registry.terraform.io/ciscodevnet/aci\"] (close)" -> "[root]
aci_subnet.terraform_bd_subnet (expand)"
                "[root] provider[\"registry.terraform.io/ciscodevnet/aci\"]" -> "[root] var.user"
                "[root] root" -> "[root] provider[\"registry.terraform.io/ciscodevnet/aci\"] (close)"
        }
}
```

Interactive(ish) Terraform

How do we interact with Terraform HCL configuration?

© 2026 Cisco and/or its affiliates. All rights reserved.

How do we interact with Terraform HCL configuration?

- This works fine for simple HCL, since errors are probably typos or syntactical
- Single level of variable creation (maps, assignments) make for easy troubleshooting

How do we interact with Terraform to ensure some level of “function” prior to performing the TF cycle?

© 2026 Cisco and/or its affiliates. All rights reserved.

Terraform has a console!

- `terraform console` allows for interactive interrogation of Terraform
  - Variables
  - Configurations
  - State (if present)

- Perform variable and data interpolations based on built-in functions within Terraform

- However, there is no Terraform REPL!

Workspaces (kinda) Solve the Problem

© 2026 Cisco and/or its affiliates. All rights reserved.

Workspaces don’t solve everything

- Default workspace isn’t main – but its kinda like main
  - Workspaces can test drift/changes from default
  - All else being held equal (backend, modules, providers)

- Don’t use workspaces to separate architecture/domain/roles
  - State is unique per workspace; you’re going to have a bad time

- This isn’t a long-term test/dev solution
  - State isn’t separated in workspaces; RBAC, cred leaking, etc apply. This is for testing single stage feature

workspaces Demo

Simplifying the Automation

Ansible has roles. What does Terraform have?

- Terraform uses the concept of modules for simplification and abstraction of configuration
- Can reside in project folder, be called from Registry, or a remote git repository
- Referenced in main.tf, structure follows general project structure
- Abstracts underlying “work”; present only variables that are needed

© 2026 Cisco and/or its affiliates. All rights reserved.

When to build modules?

- Simplify configuration
  - Abstract the complexity and present only top-level variables and resources
- Prevent configuration issues
  - Removal of configuration options provides easier to interrogate automations
- Configuration re-use
  - Common sets of automation routines can be packaged and shared across teams/organizations

module Demo

Wrapping it All Up

Sample code is here!

https://github.com/qsnyder/devnet-2565

Includes:

- Command List
- Sample TF files for console interrogation
- ACI configuration module
